## MultiSpread™ 100-SP

Self Propelled Topdresser

## OPTIONS

### ■ Electric Start

An added battery and key switch enables users to start the product without pulling a ripcord.

### ■ Light Material Sides (shown above)

Extend the capacity by nearly 2x for light materials like dry compost and more. Though weight capacity remains 1,000 lbs., this option allows light material users to topdress with half the trips to reload.

### ■ Spinning Expellers (shown above)

Attach in place of the brush and send materials to the left and right for wide open areas and fast coverage. Metered right, these spinners can reduce steps and make jobs go by much faster by covering 3-4 times the width of the brush expeller.

Earth & Turf's MultiSpread™ topdressers will spread a wide variety of materials, wet or dry. These machines are fast, reliable, and backed by one of the best warranties on the market. **The MultiSpread™ 100-SP models will spread sand, compost, and topdressing mixes.**

## Features

### Adjustable End Gate

This dial makes it easy to adjust the flow and meter how much material comes out per pass.

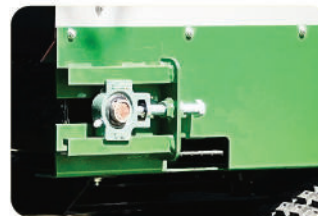

### Loading Chutes

Stick out the front and back of topdresser for easier loading with a wider bucket 9 up to 48".

### Pressure Washer Cleanouts

Cleaning under the belt couldn't get easier with slits on both side to the inside for water to carry debris out from under the belt.

### Belt Tightening Adjustment

The belt tighteners are easy to adjust from both sides to be sure your belt is tight and tracking true for each round

## 100-SP Benefits

■ With a variable transmission, walking speed while spreading can reach 4MPH without any effort from the operators. Our heavy-duty Tuff Torque transmission will move the machine even with a full load of sand. With a real transmission, the machine will move forward and backward up or down hills, meaning less work for the operator and easy control when descending a hill with heavy materials.

■ Simple controls leave driving an easy experience for even a novice operator. The 100SP will follow behind just like a little wagon when the handle is pushed down, it also has fixed steering by pushing it side to side to keep tight control.
